HOME PRODUCTS

UNIQUE ON THE MARKET

BROAD CHOICE OF POSSIBILITIES

EXPRESS YOURSELF

OVER 200 RAL COLOURS

OVER 40 VENEERS

The colour of windows can be matched to the colour of your entrance door, garage door and rolling shutters. It is also possible to order windows in two colours to match the colour of the façade on the outside and the interior colour scheme inside. In this way, all elements are perfectly suited to the needs and features of the building.

COMPLETE RANGE OF SOLUTIONS FOR YOUR HOME

WE TAKE CARE OF EVERYTHING

ASSEMBLY
FAST AND PROFESSIONAL

The production process is based on cutting-edge technologies which allow very short lead times for product delivery. Consequently, all the elements are supplied at the same time and can be quickly installed on site.

SERVICE
UNDER CONTROL

A network of authorized service centres guarantees the most professional installation and regular maintenance of finished products, which ensures long and reliable product life. Consequently, customers enjoy their purchase for many years to come.

WARRANTY
5 YEARS

Krispol windows are sold with 2 year' manufacturer's warranty, that may turn into 5 years if regular maintenance is carried out.

VIRTUAL DESIGN STUDIO

www.krispol.eu

Krispol's Virtual Design Studio is an absolutely remarkable tool allowing you to individually design the entrance door, garage door, windows and rolling shutters, so that you best match the design of you house. Thanks to a wide-ranging array of colours, patterns and models, everyone can use the power of their imagination and pick joinery elements to match their preferences. Most importantly, however, our customers can be sure that Krispol will supply the precise selected configuration.

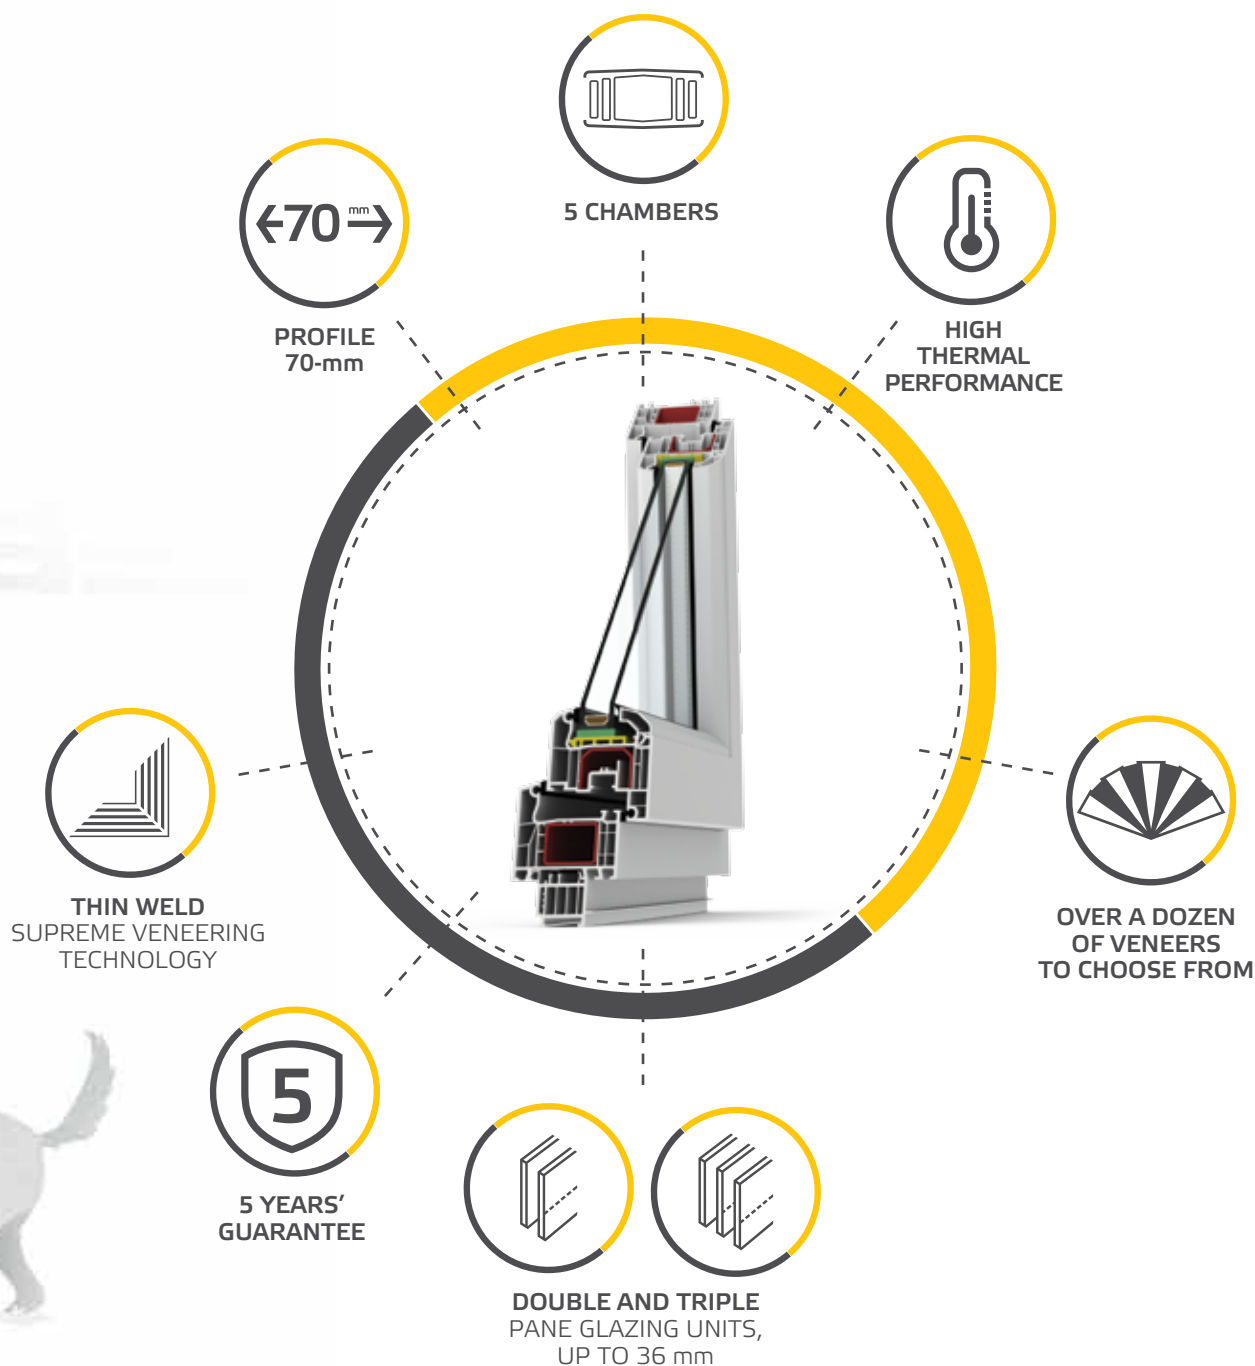

PVC WINDOWS

FEN 70

Leave the hustle and bustle behind.

Enjoy the warmth of your home. Elegantly designed and durable FEN 70 windows with double insulation ensure better living comfort for the whole family. Top-quality window profiles and glazing deliver exceptionally good thermal and acoustic insulation factors for windows of this class. In practice, this translates into lower costs of heating and effective elimination of outside noise.

A broad range of functional accessories makes it possible to tailor the windows and terrace doors to individual needs. You can order FEN 70 windows in uniform colours, choosing from around a dozen of attractive veneer types, or opt for a veneered version on the outside only, showcasing the superb visual form of the profile.

PVC WINDOWS

FEN 76

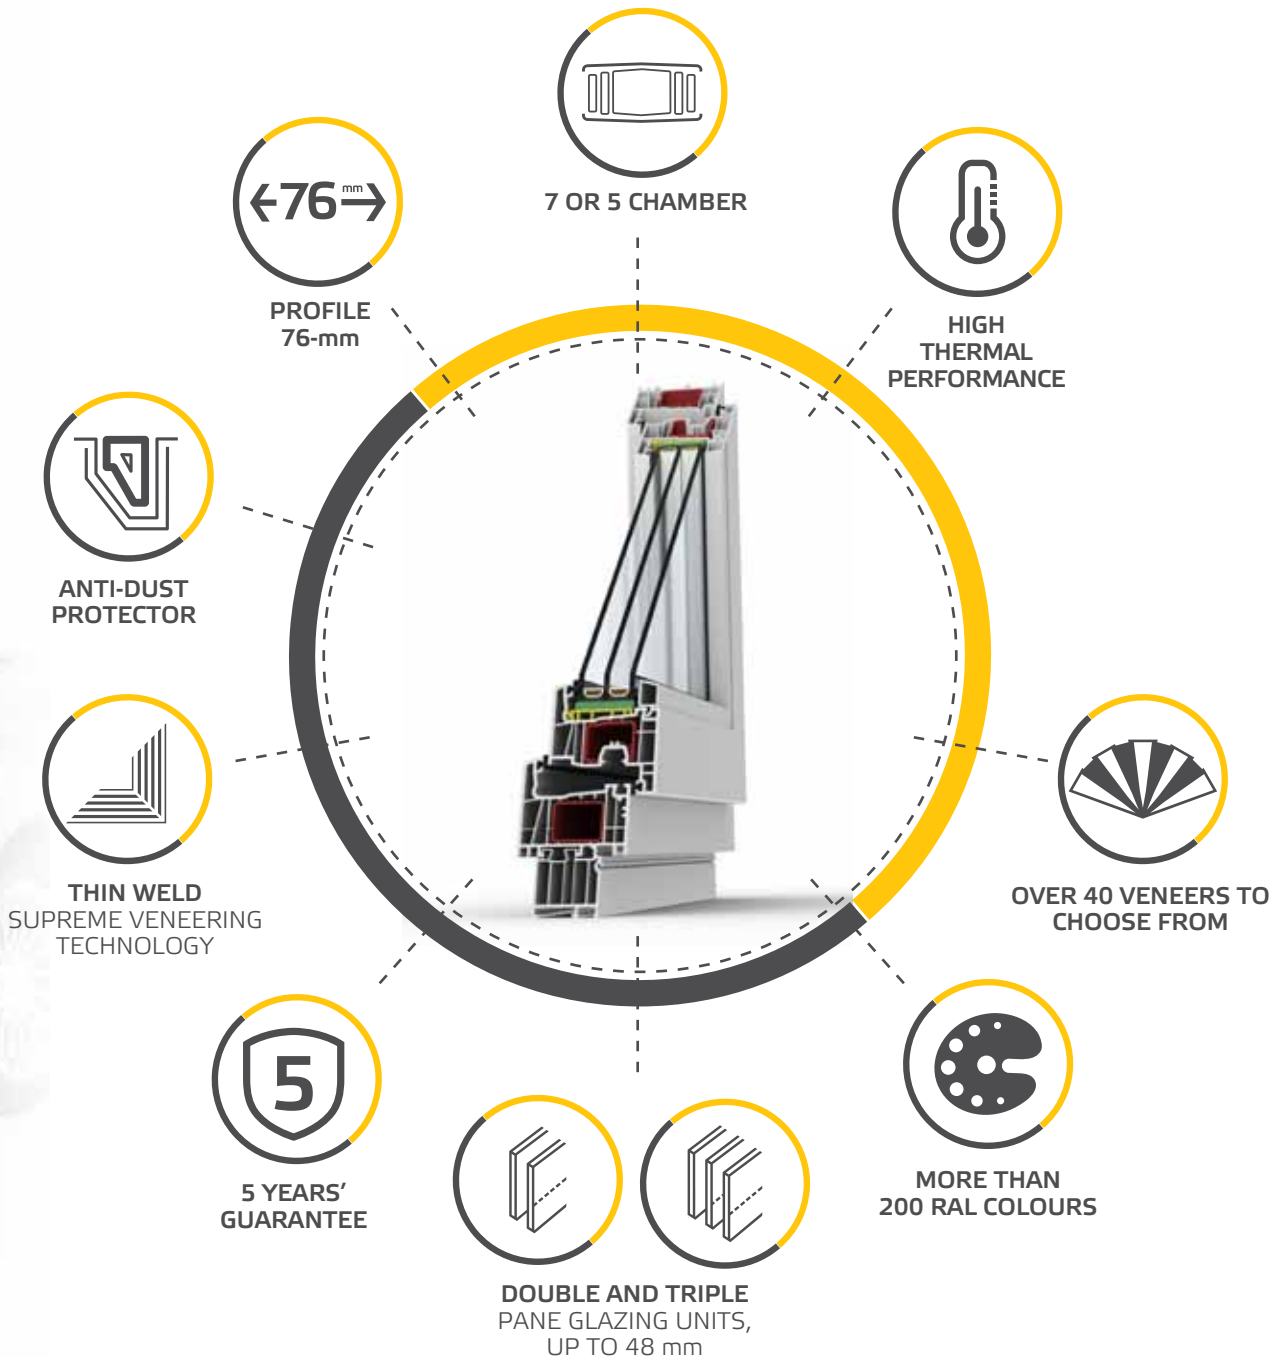

Ask for more!

FEN 76 is a window system which, thanks to extraordinarily low heat transfer coefficients, can be successfully applied in energy-efficient homes.

The elegantly styled form of the window profile is visually appealing both in the snow white version and in other colours available. Our customers are offered over 40 attractive veneers. In addition, thanks to aluminium overlays, we are

able to provide profiles painted in any colour from the RAL palette. FEN 76 is also the best choice for windows of non-standard shapes (e.g. based on small-radius circles) as well as tilt-and-slide and lift-and-slide terrace doors.

There are no limits to creativity!

PVC WINDOWS

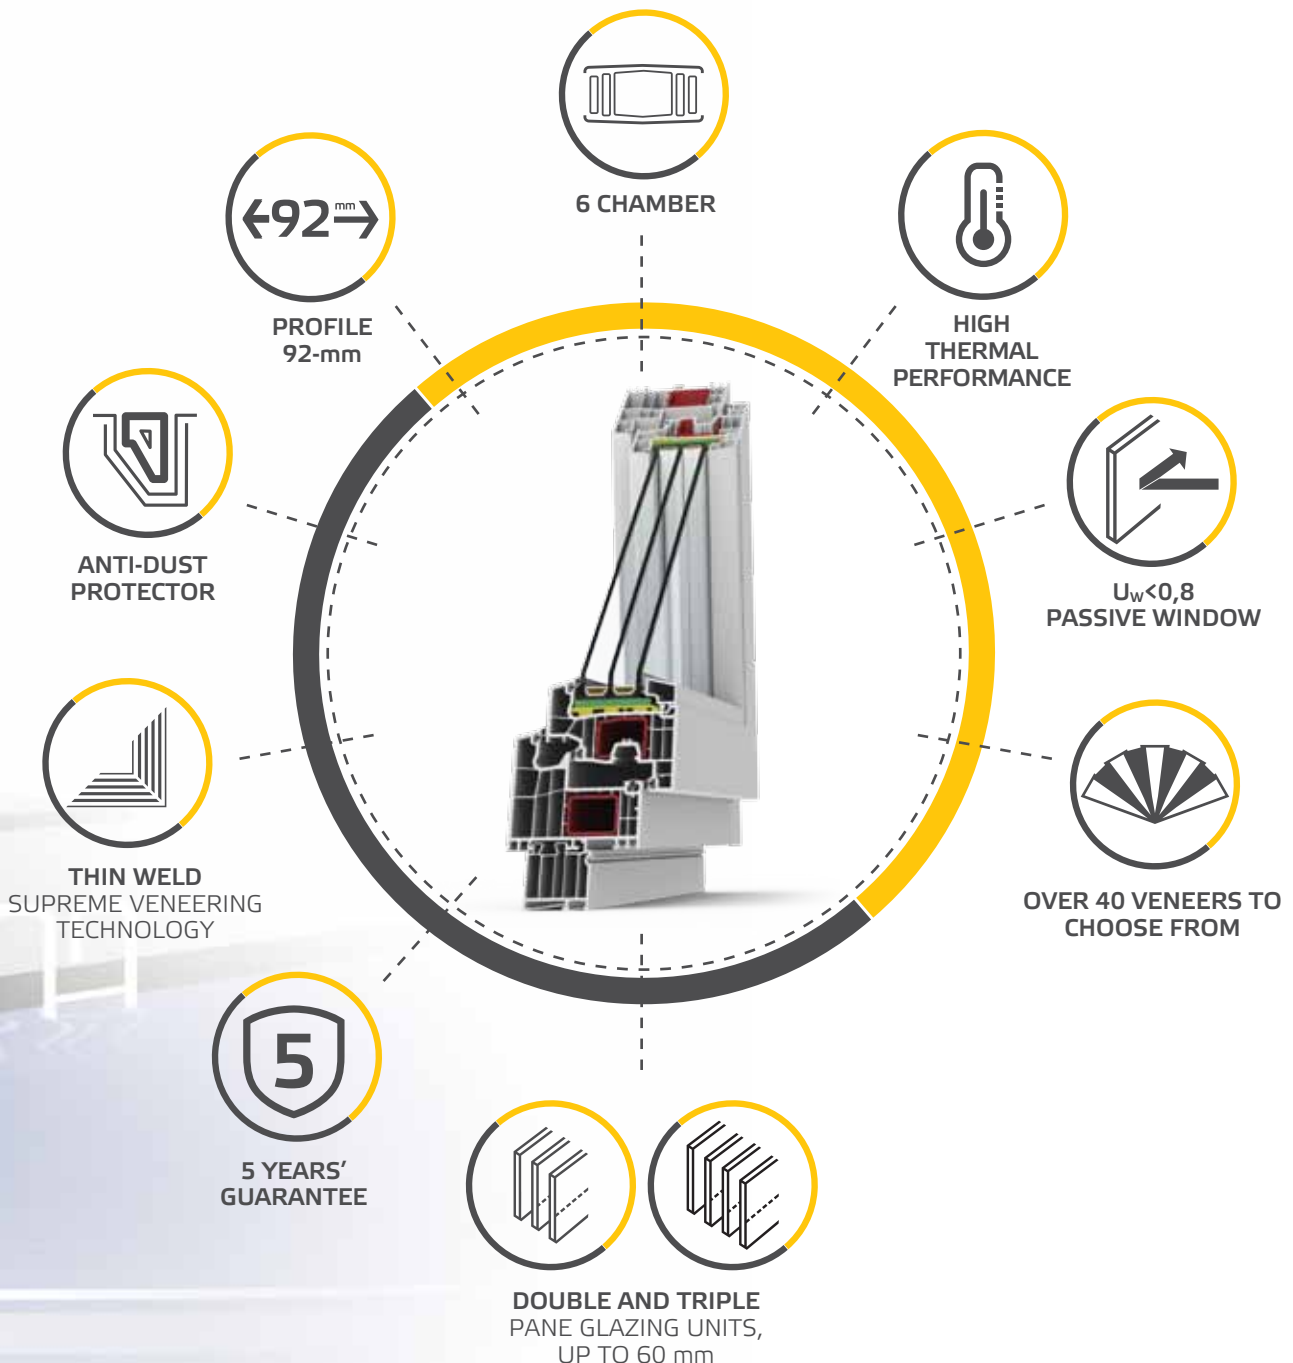

FEN 92

A great choice for all those who appreciate unique solutions.

FEN 92 windows are the best investment in the future of your home and a guarantee of minimum maintenance costs for many years to come. One of the best window profiles on the market delivers heat transfer coefficients that surpass all other systems available on the market, ideally meeting the requirements of passive building design. The subtle form of the profile incorporates the most advanced solutions in the window design technology, while high resistance to weather

conditions protects the windows from damage, so that they always look like new.

FEN 92 windows and terrace doors can be finished in any style that reflects the individual preferences of the user: on one or both sides, or using different veneers on the outside and inside ("bicolour"). A wide selection of over 40 veneers ensures optimum matching of windows to virtually every interior design and façade style.

PVC WINDOWS ACCESSORIES

HOPPE'S SECUSTIK® HANDLE
SAFETY WHICH YOU CAN... HEAR!

Each time the Secustik® window handle is turned, its security bolts move very precisely to special notches in the housing with an audible click which indicates that the security function has been activated. The patented locking mechanism prevents unauthorized tampering with the Secustik® handle and makes it impossible to open the window from outside, the same protecting your home against burglary.

STEP-WISE TILT

Handle manipulations result in a total of five different window sash positions. The function makes it possible to adjust the intensity of airing, the same preventing unnecessary loss of heat. Placed in a tilted position, the window is also protected from slamming shut.

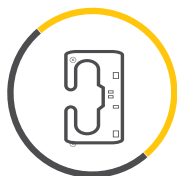

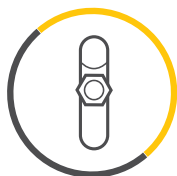

MULTIFUNCTIONAL ELEMENT

The dedicated multifunctional element prevents the tilting of the window sash when the window is open. In this way, the window cannot fall out of the upper hinge, what improves user safety. The element also offers the possibility of closing balcony doors from the outside acting as a latch, and makes it easier to close the sash by acting as a lift.

MAGNETIC STRIKES

Window opening sensors are an element of a burglar alarm system, and a highly effective, yet discreet, device protecting your home from burglars and other intruders. Sensors are integrated with multi-point fittings and are invisible when the window is closed.

ANTI-BURGLARY MUSHROOM CAM

The wide edge of the roller cam, sometimes called the "mushroom cam", engages the window sash in the anti-burglary latch on the frame. The combination of the two elements effectively secures the closed window against burglary attempts.

CONCEALED HINGES

Now windows can be even more visually attractive thanks to concealing the hinges. SELECT fittings are completely invisible, also from the inside!

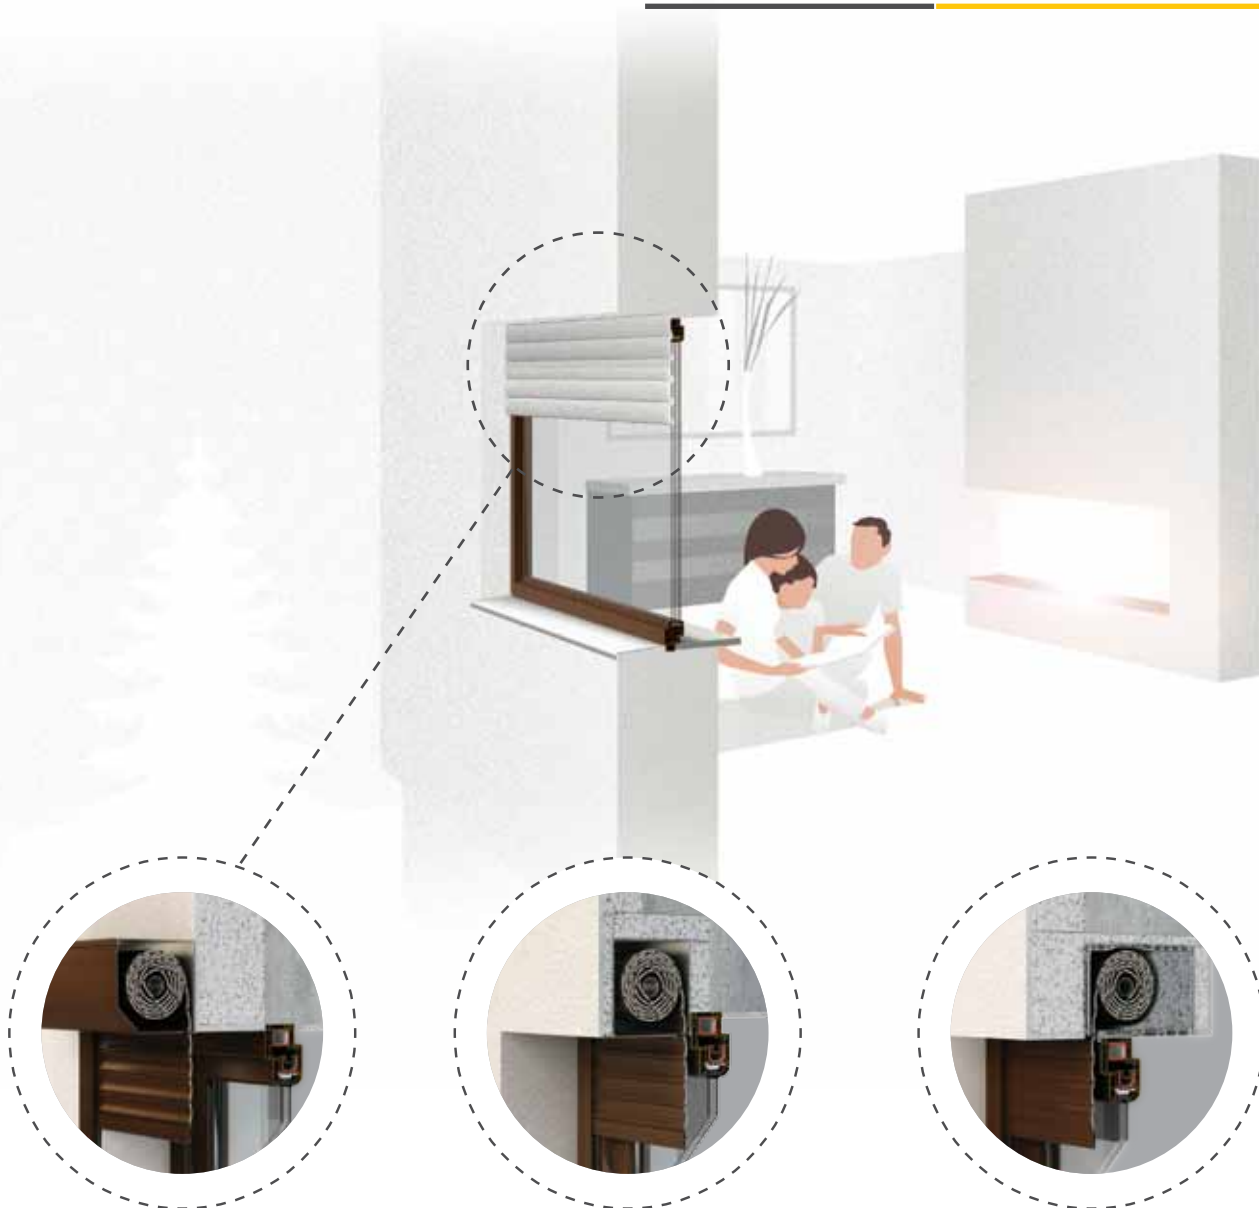

ROLLING SHUTTERS

Energy efficiency is one of the most important parameters of each house. The better the insulation, the lower maintenance costs. Since windows are the largest openings in the building's structure, they should be protected properly so as to improve the overall energy balance of the building.

KRISPOL'S THERMALLY INSULATED ROLLING SHUTTERS REDUCE HEAT LOSSES UP TO 37%! THIS MEANS CONSIDERABLE SAVINGS!

Rolling shutters also bring a range of benefits outside the heating season. In hot weather, they protect the inside of the building from overheating. They make it possible to control the amount of light coming inside, thus increasing the comfort of your working and resting time. They are a natural barrier ensuring intimacy and, due to their attractive colours, they are an additional element of interior decoration. A combined purchase of windows and rolling shutters allows both products to be ideally matched both in terms of structure and visually appealing colours.
